## GENERAL FABRICATIONS

We take on many contracts that deal with day to day fabrications in plastic, mild steel and stainless steels.

From time to time a requirement will be such that a mix of materials and assemblies are required.

We deal with small, medium and large batch work and can offer a quotation within 24 hours.

We have also the technology to develop a product from the most basic of information supplied by our clients and are willing to work closely together to obtain the exact final product at a competitive rate.

GENERAL FABRICATIONS

## **GENERAL STATEMENT**

Because the users of steel products operate in an increasingly competitive environment we have strategically invested in equipment and skills that enable us to supply not only basic steel products but finished components ready for use on site or on the production line.

This value adding service allows us to assist our customers in managing and cutting cost.

Because of the number of users of these services we are able to provide a professional and specialist service that few if any other organisations are able to match.

## **PROCESSING SERVICES**

Our processing services include:

- Steel Fabrications
- Plastic Fabricating
- Saw Cutting
- Plasma Cutting
- Tube Cutting
- Profiling
- Shot Blasting
- Painting
- Galvanising
- Linishing
- Drilling
- Section Bending
- Milling
- M/C Threading
- Turning
- Design from Basics

## STRUCTURAL STEELWORK

Many household structures and other applications require steelwork. The design of beams and girders, including simple beams, continuous beams, plate girders and gantry beams can be supplied in accordance with BS5950 Part 1.

Beams and girders are members whose main function is to carry a vertical load across horizontal distances (spans) and are therefore required to resist the moments and shears produced by these conditions.

The sizes available are vast and prices can be given based on quantity, span and size.

Many structural steel work provided can be complicated and based on minimum batch needs.

STRUCTURAL STEELWORK

## HAND RAILING

All handrail components are Iron Casting and galvanized to BS EN 1461 1999.

Supplied with zinc coated case hardened set screws as standard.

### Features

- Manufactured with simplicity and ease of use very much in mind.
- No special skills required
- No welding
- No bending
- No threading just on Allen Key to tighten set screws
- Tubing assembles very quickly

## FENCE AND GATES

All fence + gates will be suitable for outdoor or indoor environments and can be fitted with ease based on initial and final site surveys. All fence + gates of this type will be custom built.

### Features

- Shot blasted, zinc phosphate and powder coated to colour requirement
- Railheads custom built
- Edging and centre rails custom built
- Long lasting finish with little maintenance

## STEEL ACCESS LADDERS

Many outfalls and main drain sewers require the need for access for general maintenance and repair services.

We offer access ladders which can be either a fixed type design or adjustable subject to clients specification.

These can be bespoke designs to any length and width. The outreach can be designed also to clients needs.

Ladders can be supplied in either galvanized mild steel material or grade 304/316 stainless steel.

STEEL ACCESS LADDERS
